

ABSTRACT

There are provided a novel curable polymer compound of the present invention comprises having a structure represented by the following Formula (I):

wherein R^1 represents a hydrogen atom or a methyl group, R^2 independently has one or more organic residues selected from the group consisting of an alkylene group, a branched alkylene group, an alkenylene group, a branched alkenylene group, a cycloalkylene group, a cycloalkenylene group and an arylene group, and n represents an integer of 0 to 1, a method of preparing the polymer compound, a radical polymerizable and curable composition using the polymer compound, and a cured product obtained by photo-curing the radical polymerizable and curable composition.
